

Bayesian Model (Paradigm 1) — hand t_0 per cell, saccadic two-component fraction, saccadic t_0 per participant

A. HRT t_0 : Method A (MLE) vs Method B (Bayesian)
(cells at the 130 ms floor: MLE 11/48, Bayesian 0/48)

B. SRT express fraction & uncertainty
(wide bars = bimodality not firmly identified)

C. SRT non-decision time per participant
(14 at floor, 0 at fastest-saccade ceiling, 0 free)
