

Non-Decision Time (t_0) — Hierarchical Bayesian estimates (Paradigm 1)

HRT: hand non-decision time by speed 170→158→148 ms (0/48 cells floored; Friedman p = 0.003). SRT: saccadic non-decision time is NOT identifiable — 14/14 intervals reach the 70 ms floor and 0/14 the ceiling set by the fastest saccade (0 clear of both), so it is reported as fixed at 70 ms.
