

Bayesian Model (Paradigm 2) — hand t_0 per cell, saccadic two-component fraction, saccadic t_0 per participant

A. HRT t_0 : Method A (MLE) vs Method B (Bayesian)
(cells at the 130 ms floor: MLE 19/64, Bayesian 0/64)

B. SRT express fraction & uncertainty
(wide bars = bimodality not firmly identified)

C. SRT non-decision time per participant
(10 at floor, 6 at fastest-saccade ceiling, 1 free)
