

Non-Decision Time (t_0) — Hierarchical Bayesian estimates (Paradigm 2)

HRT: hand non-decision time by speed 147→147→152→151 ms (0/64 cells floored; Friedman p = 0.026). SRT: saccadic non-decision time is NOT identifiable — 10/15 intervals reach the 70 ms floor and 6/15 the ceiling set by the fastest saccade (1 clear of both), so it is reported as fixed at 70 ms.
